

Problem Statement: Health-Tech

Rural and underserved communities in India lack access to quality healthcare due to limited infrastructure and resources. To bridge this gap, a comprehensive digital healthcare platform is needed, integrating telemedicine, health education, preventive care, and efficient supply chain management.

Key Points of the Problem:

1. **Limited Access:** Geographical barriers and inadequate healthcare infrastructure restrict access to quality medical services.
2. **Healthcare Disparities:** Rural areas face significant disparities in healthcare compared to urban regions, affecting health outcomes.
3. **Comprehensive Solution:** Integration of telemedicine, health education, and preventive care is crucial to address these challenges effectively.
4. **Efficient Supply Chain:** Proper management of essential medicines and medical supplies is essential to ensure healthcare availability.
